WHY CHAINBYTES ATM?

Easy to use and operate

- Our live technical support team assures that you do not need any technical or programming knowledge to operate our BTMs.
- Our machines are “Plug and Play” and all updates are done remotely by our highly skilled staff.
- Our team of over 40 professionals works around the clock to bring innovations and assure maximum performance and minimal downtime on your machines.
- Our simple highly intuitive interface was built with end customer in mind and it assures that anyone can buy/sell or redeem cryptocurrency with ease, if you can use a smartphone you can use our BTM.
- With our simple Dashboard- You can manage all of your machines without needing to have multiple management consoles, know about servers or integrations of code.

Cost efficient

- One of the biggest cost in the industry is money sitting in your dispenser and receiver, that's why Chainbytes BTM is equipped with Smart Payout Cash Recycler for 2-way operations which is capable of providing to a client notes previously entered by another. Since cash that is inserted by one customer can be dispensed directly to following customers this maximizes the time in which ATM is capable of tending to transactions without cash replenishing or collection and in the same time minimizing needed float and ownership cost, to start operations you need as low as couple hundred of \$ in your recycler, which makes our BTM a perfect partner for those looking to start a business with minimal initial capital. While our operators are reporting exceptionally fast ROI.
- Our machines offer secondary revenue stream from marketing video campaigns run on the 2nd screen and promotional codes and cards dispenser which some models have installed.

Absolute control

- Rigorous cash accounting.
- All operations are reflected in a transparent way inside the Blockchain.
- Complete and exclusive control over the system and the bitcoin's stock for the owner.
- Our Dashboard system will allow you to check on all of your machines at any time and from any internet connected device.
- Via Dashboard operator can control all aspects of the machines, set fees and KYC limits, follow and manage all transactions, approve customers, set auto-payments for the division of fee between interested parties, set promotional campaigns via a voucher system, check the amount of cash in the machines, follow the performance charts and transaction trends, connect to several major USA exchanges for optional buy-back option and much more.
- Full remote management of the ATM by using secure protocols.
- Our machines via Dashboard are connecting to your hot-wallet. Clients are the owner of the wallet used for operation and ChainBytes do not hold or store client funds.

Easy Compliance

- As a US company we understand how important is to be compliant with all KYC/AML policies. That's why we secured a special Easy compliance package for our USA based customers. For only \$1000 our partner company BtmCompliance will provide you with written AML/KYC policy as well as register you with FinCEN, and if you choose to continue with them they will help you in your day to day operation, clearing transactions of flags and reporting any suspicious activity and all of that for as low as \$100 per machine per month, that way you can concentrate on growing your business instead of worrying about regulations.
